

Heating- and insulation sleeves

Heating- and insulation sleeves are flexible, re- and detachable heating and insulation systems. It can be connected with nearly every object.

Essential product features and advantages

- Installed, constructed and customized regarding to the customer's request
- high standing time by using chosen materials and optimized design
- re- and detachable every time
- high effective, integrated warmth isolation
- regular heat input by leak proof proof heating head assignment
- robust and dirt repellent surface with various coatings

- ISO-M-BAND-isolation in a analyzer cabinet tube mounting with 180°C

- Electrically heated

Fluid-technology—heating and cooling with liquid

Heating sleeves

Technical data

Max. temperature + 250 °C

(optional: + 450°C)

Outer jacket

PFTE: bis + 250°C

Silikon bis + 180° C

Alu-coating, PE: bis + 150

Supply voltage:

230 V AC

(optional: 110V AC)

Kind of protection:

IP40 (optional: IP54)

Protection class I

(with ground)

Temperature sensor

integrated regarding to customer's request

Electrical connection

ready for immediate connection

Remark: These parts are made regarding to the customer request!
